SIMATS ENGINEERING
ASSESSMENT TOOL 3: MCQ Test

COURSE NAME:	Cloud Computing and Big Data Analytics	**COURSE CODE:**	CSA1516

COURSE OUTCOME COVERED

CO3: *Implement cloud-based solutions using cloud storage, web APIs, and platform services for real-world applications.* (BL3)

Assessment Tool Weightage: 10%

Dave's Taxonomy: Precision (Level 3) **Total Marks: 30**
Question Count: 15

Code of Conduct
I R.Jaideep (192525441) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.
I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student**: R.Jaideep**

Assessment Tasks
MCQ Test
1. Which cloud storage model is best suited for storing virtual machine disks?
A. Object storage
B. Block storage
C. File storage
D. Archive storage
2. Which protocol style is widely used for lightweight web APIs in cloud platforms?
A. SOAP only
B. REST
C. FTP
D. SMTP
3. Serverless computing is best described as:
A. Computing without networks
B. Running code without managing servers directly
C. Local execution only
D. Batch-only processing
4. Edge computing primarily helps by:
A. Increasing central storage only
B. Reducing latency near data sources
C. Eliminating internet access
D. Replacing cloud storage fully
5. Fog computing differs from edge computing because it:
A. Always runs inside sensors

B. Introduces an intermediate distributed layer between edge and cloud
C. Works only in private clouds
D. Uses no network resources

6. Which storage model is commonly used for shared departmental files?
A. File storage
B. Register storage
C. Cache-only storage
D. Tape-only storage

7. A browser calling a cloud web application typically communicates through:
A. BIOS interrupts
B. Web APIs
C. Only command-line tools
D. VPN tunnels only

8. SAN stands for:
A. Secure Access Node
B. Storage Area Network
C. Shared Application Namespace
D. Service Access Network

9. Which of the following is a common benefit of serverless architecture?
A. Manual scaling of servers
B. Pay-per-use execution model
C. Dedicated physical hardware ownership
D. No monitoring required

10. Collaboration within the cloud usually improves:
A. Shared access to services and documents
B. Hardware disposal speed
C. Cable management
D. BIOS configuration

11. Which one is an example of a platform service?
A. Managed application runtime
B. Keyboard driver
C. Physical rack switch only
D. Local USB storage

12. Object storage is generally preferred for:
A. Mounting OS boot volumes
B. Large unstructured cloud data such as images and backups
C. CPU scheduling
D. Hypervisor installation

13. Which component allows applications to communicate programmatically with cloud services?
A. Heat sink
B. Web API
C. Mouse driver
D. Compiler cache

14. A low-latency smart factory use case is best supported by:
A. Edge computing
B. Cold archive only
C. Offline storage
D. Manual processing

15. Which one is not a typical cloud access method?
A. Browser-based access
B. API access
C. Platform console access
D. Paper-based access

MCQ Test Rubric

Criteria	Weightage	Level 4 - Exemplary	Level 3 - Proficient	Level 2 - Developing	Level 1 - Beginning
Conceptual Understanding	30%	Answers reflect strong and accurate concept mastery	Mostly accurate understanding	Partial understanding	Weak understanding
Accuracy of Responses	30%	Nearly all responses are correct	Most responses are correct	Some responses are correct	Few responses are correct
Application Awareness	15%	Shows strong recognition of practical cloud use cases	Reasonable recognition	Limited recognition	Weak recognition
Time Management	10%	Completes assessment efficiently	Completes on time	Needs extra time	Unable to finish well
Question Interpretation	15%	Interprets all items correctly	Misreads very few items	Misreads several items	Frequently misinterprets questions

	Answer	Correct Option
	Answer	**Correct Option**
1	**Block storage**	**B**
2	**REST**	**B**
3	**Running code without managing servers directly**	**B**
4	**Reducing latency near data sources**	**B**
5	**Introduces an intermediate distributed layer between edge and cloud**	**B**
6	**File storage**	**A**
7	**Web APIs**	**B**
8	**Storage Area Network**	**B**
9	**Pay-per-use execution model**	**B**
10	**Shared access to services and documents**	**A**
11	**Managed application runtime**	**A**
12	**Large unstructured cloud data such as images and backups**	**B**
13	**Web API**	**B**
14	**Edge computing**	**A**
15	**Paper-based access**	**D**
